Platform Idea :

This project is a personal digital platform designed to help users organize and store their certificates, achievements, and future goals in one secure place.

Instead of keeping important files on multiple devices or risking their loss, users can upload them here, access them anytime from any device, and download them as PDFs.

It's like **Cloud Storage** but unlike traditional Clouds tools like **Google Drive**, this platform goes beyond just storing files. It's a smarter, more personalized system, including a dedicated section for future plans and courses to take and display it as a dashboard to track your progress.
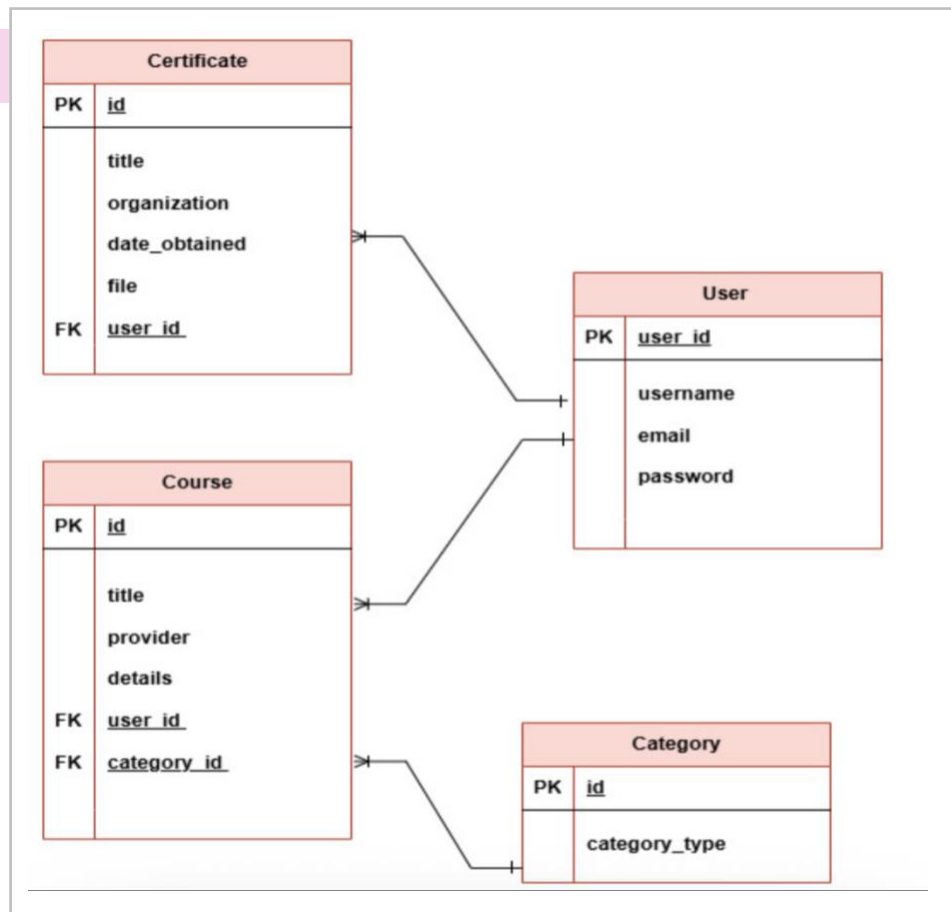

Motivation :

Many people lose track of their certificates or forget their learning plans because they are scattered across devices or notes.

Such as : if I plan to take the IELTS exam or enroll in a training course next month, this platform helps me write down my priorities and organize my future plans easily.

So this platform solves that problem by offering a centralized and intelligent space that combines cloud storage with goal tracking, helping users stay organized, and always ready to achieve more. 💪

User Story

As a user, I want to:

1. Create my own account and be able to log in securely.
2. Upload my certificates and add their details so I can access them later.
3. Download my certificates in PDF format to my personal device.
4. Add future courses that I plan to take in order to track my progress.
5. Edit the information of any certificate or course I have added.
6. Delete a certificate or course that I no longer need.
7. View all my achievements in an organized way, categorized by type (through a dashboard).
8. Search or filter to easily find a specific certificate or course.
9. Access my personal résumé in a dedicated section of the website.

Backend Routes (Django)

Method	URL Pattern	Actions	CRUD
POST	/api/register/	Creat a new account	
POST	/api/login/	Login for user account	
GET	/api/certificates/	View all certificates you have	READ
POST	/api/certificates/	Add a new certificate	CREATE
PUT	/api/certificates/:id/	Update specific certificate	UPDATE
DELETE	/api/certificates/:id/	Delete specific certificate	DELETE
GET	/api/courses/	View all future courses or plans	READ
POST	/api/courses/	Add a new course or plan	CREATE
PUT	/api/courses/:id/	Update specific course	UPDATE
DELETE	/api/courses/:id/	Delete specific course	DELETE

Frontend Routes (React)

Path	Page / Component	Description
/home	HomePage	Overview for home page
/about	AboutPage	Overview about who is I am
/login	LoginPage	User login form
/register	RegisterPage	Create a new account for user
/dashboard	Dashboard	Displays user future plans
/certificates	CertificateList	List of all certificates do u have
/certificates/new	AddCertificate	Add a new certificate
/certificates/:id/edit	EditCertificate	Edit specific certificate
/courses	CourseList	List of all courses or future plans
/courses/new	AddCourse	Add a new course or future plans
/personal	PersonalFiles	List of all Personal Files such as : National ID, Electronic Passport, Graduation Certificate , Resume
